Load the smoker in your DAW

AU + VST3 on Mac. VST3 on Windows. No standalone application.

Mac: install from the DMG

1. Quit your DAW. Download and open IRSauce-0.4.0-Mac-Installer.dmg.

2. Open Install I.R.Sauce.pkg inside the disk image and complete the installer. System-wide installation may require administrator authorization.

3. Reopen your DAW, scan for new plug-ins, and insert IRSauce on a stereo audio track or bus.

> The beta uses local ad-hoc signatures. It is not Developer ID signed or Apple notarized. If macOS blocks it, review the message through the normal Privacy & Security process. Do not disable Gatekeeper.

Formats, folders and first use

Platform / format	Installed location
Mac AU	/Library/Audio/Plug-Ins/Components/IRSauce.component
Mac VST3	/Library/Audio/Plug-Ins/VST3/IRSauce.vst3
Windows VST3	Copy the full IRSauce.vst3 bundle into C:\Program Files\Common Files\VST3\

Choose the right format

Logic and GarageBand use AU. Compatible VST3 hosts can use VST3. Pro Tools requires AAX, which is not included. Format availability is not a claim that every DAW/version has been tested.

First sound check

Use a stereo track with modest input level. Start with all effects at their default values. Select a recipe, reduce Output if needed, and compare with Bypass. Save and reopen the DAW session to check recall.

If it does not appear

Confirm that the full bundle is in the folder above, restart the DAW and use its rescan function. On Mac, check the DAW Audio Unit validation result. On Windows, do not copy only the DLL out of the VST3 bundle.

If you downloaded source instead

A source ZIP is not an installed plug-in. On a Mac with Apple Command Line Tools, run Create_Mac_Installer.command. The launcher builds universal binaries, runs tests, creates the package and verifies the DMG. Keep dist/mac-build.log if a step fails.

Compatibility target

The Mac build targets macOS 11+ on Intel and Apple Silicon. The Windows build targets x64. Consult the audit report for what has actually passed on the build runners. No subscription or network connection is needed for audio processing.
